Cost-Efficient Services + Why the Current UI Is Not Complete

1. ■■■■ ■■■■: ■■■ ■■■■■ ■■■■■ ■■■■■ ■■■■■ ■■■■■ ■■

Discovery ■■ Backend Audit ■■ ■■■■■■ ■■ project ■■■ ■■ backend foundations ■■■■■ ■■ ■■■■■■ ■■■■—Node/Express, PostgreSQL/PostGIS, Redis, Socket.IO, Razorpay, Firebase Admin ■■ Agora token generation. ■■■■■■ ■■ feature ■■ ■■■■ ■■■■ third-party service ■■■■■■■ ■■■■■■ ■■■■■ ■■. ■filecite■turn4file1■L24-L40■

■■■■■ ■■■■■ current problem service ■■ ■■■■ ■■■■■, ■■■■■■ Flutter ■■ backend ■■ disconnect ■■: localhost base URL, profile route mismatch, booking payload mismatch, nearby-Pandit parameters missing, ■■ ■■ screens ■■ local/mock data ■■ ■■■■■. ■filecite■turn4file1■L215-L241■

2. Recommended low-cost service strategy

Need	Recommended choice	Why / current situation	Priority
OTP / SMS	India-focused SMS provider (Airtel IQ / MSG91 / similar)	Current backend only logs/returns mock OTP. Use a provider only when moving beyond development.	HIGH
Push notifications	Firebase Cloud Messaging (FCM)	Backend already has Firebase Admin. Flutter only needs FCM client/token integration.	HIGH
Online Puja / Consultation	Google Meet initially	Current audit says Google Meet is not integrated. For a low-cost MVP, generate/store meeting links rather than building full video infrastructure first.	MEDIUM
Payments	Razorpay	Already implemented on backend: create-order, verify and webhook. Main missing piece is Flutter checkout integration.	HIGH
Realtime	Socket.IO + Redis	Already partly implemented. Add Flutter Socket.IO client instead of replacing the stack.	HIGH
Video alternative	Agora only if native in-app video is required	Backend token generation exists, but Flutter SDK and room lifecycle are missing. Avoid adding this cost/complexity for MVP if Meet is acceptable.	LATER
File storage	Cloud object storage (S3/GCS/Cloudinary) when uploads go production	Current uploads are local disk; cloud deployment can lose local files.	HIGH before production
AI chat	Gemini/OpenAI API only when AI feature is actually activated	Current AI chat is scripted keyword matching; no backend AI API exists.	LATER
Maps	Use PostGIS + device location first; add Google Maps services only if routing/map UX is needed	Nearby Pandit logic already uses PostGIS; Google Places exists only for temple lookup.	MEDIUM
Email	Skip initially	No email service exists and the core MVP does not require it.	LOW

3. UI complete ■■■■■ ■■■■ ■■?

■■ ■■■■■ design ■■ issue ■■■■ ■■. Current UI ■■■ ■■■■ screens visually complete ■■■, ■■■■■ ■■■■ ■■■■ real API/database/service connection ■■■■ ■■. Discovery report ■■ BookScreen ■■ hardcoded, booking flow ■■ broken/fallback, consultation/Kundli/AI/flowers/shop/Panchang/temple/notifications ■■ UI-only, ■■ profile ■■ broken ■■■■■ ■■. ■filecite■turn4file0■L193-L218■

UI ■■■ ■■■■■ ■■	■■■ ■■■ ■■■■ ■■ ■■■ ■■	Complete ■■■■ ■■ ■■■ ■■■■ ■■■■■
Puja list	Hardcoded local list	GET /poojas ■■ live data + admin CRUD
Booking	Backend call fail ■■■■ ■■ SharedPreferences ■■■ fake booking	Flutter/backend contract fix + DB booking lifecycle
Nearby Pandit	Static/mock fallback	Device lat/lng + PostGIS API + verified/available filtering
Payment	Radio/button selection only	Razorpay Flutter SDK + backend order/verify/webhook
Consultation	Local state machine + dummy Meet link	Consultation DB + slots + assignment + real meeting/session
Kundli	Canvas + in-memory data	Kundli order/data schema + Pandit/Admin workflow + document delivery
Shop	500+ local JSON products	Backend catalogue + cart/order/inventory/payment
Flowers	Local alert only	Connect existing subscription API + payment/fulfillment
AI Chat	if/else scripted responses	Backend AI service + limits/history/safety
Temple	Hardcoded Ujjain cards	Connect existing Google Places backend endpoint
Notifications	Hardcoded cards	FCM device token + server-triggered notifications
Pandit dashboard	Timers/state only	Backend duty/booking endpoints + realtime/FCM
Admin	No screen at all	Admin web dashboard + admin APIs

4. MVP ■■ ■■■ ■■■■ recommended strategy

Phase A — ■■■■ existing ■■■■■■ ■■ ■■■■■: Flutter base URL → Auth → Pooja API → Booking API → Nearby Pandit → Booking history → Razorpay → FCM.

Phase B — Pandit system: real login/OTP → profile → documents → verification → availability → booking accept/reject → notifications.

Phase C — online services: ■■■■■■ ■■■ Google Meet link based flow ■■■. ■■■ ■■■ ■■■ app ■■ ■■■■ video ■■■■■, ■■ Agora ■■ activate ■■■. Audit ■■ ■■■■■■■ Agora ■■■ backend token level ■■ ■■, ■■■■ Flutter integration missing ■■. ■filecite■turn4file1■L247-L260■

Phase D — missing business modules: Consultation → Handmade Kundli → Shop cart/order/delivery → Flower subscription → Admin portal.

Phase E — advanced: AI chat → automated Pandit matching → live tracking → advanced maps → production hardening.
